

Name of ZIP-File:	DW6.1_Hot29.zip
Date of ZIP-File (dd.mm.yyyy):	13.06.2014
Internal reference:	86284
To be used only with DocuWare version:	DocuWare 6.1
Language version:	neutral - can be used for all language versions

<b>This Hotfix contains other Hotfixes :</b>	<b>DW6.1_Hotfix16, 20, 21, 23</b>
--	-----------------------------------

**Please notice:**

- i) The HotFix includes one or more files which have to be copied manually into the appropriate folder of the DocuWare installation (see below). Replace only the existing files with the same name with the files which were coming with this HotFix.
- ii) It is required NOT to rename the original files. This may lead to unexpected system behaviour. If you like to keep the original files then move them to a different location (create an own folder).
- iii) In case of language dependent files please use only the files matching to your DocuWare language.
- iv) In case the HotFix concerns the Web Client Server we advise to empty the browser cache.
- v) In case the HotFix concerns the Web Instance then this HotFix must be copied additionally into every new created Web Instance in future.

**Installation path of the HotFix files:**

File:	Version:	Installation folder:
Docuware.ContentServer.dll	6.1.0.5176	Content Server folder
DocuWare.Document.PDF.dll	6.1.0.5170	Content Server folder
DocuWare.XChange.dll	6.1.0.5156	In every client module, content server, and any module using GAPI – replace wherever it occurs
DocuWare.Gapi.dll	6.1.0.5190	In any module using GAPI

**Description of fixed bugs, improvements etc.:****DocuWare Server / Content Server :**

*When copying a dwtiff file to a web basket an error message occurs: "Image File not found".*

**Installation instruction:**

- Stop DocuWare servers
- Replace the files
- Start DocuWare servers
