| Name of ZIP-File: | DW6.5_Hot20.7z |
| Date of ZIP-File (dd.mm.yyyy): | 07.05.2014 |
| Internal reference: | 83057 |
| To be used only with DocuWare version: | DocuWare 6.5 |
| Language version: | neutral - can be used for all language versions |

| | |
|--|----------------|
| This Hotfix contains other Hotfixes : | DW6.5_Hotfix07 |
|--|----------------|

Please notice:

- i) The HotFix includes one or more files which have to be copied manually into the appropriate folder of the DocuWare installation (see below). Replace only the existing files with the same name with the files which were coming with this HotFix.
- ii) It is required NOT to rename the original files. This may lead to unexpected system behaviour. If you like to keep the original files then move them to a different location (create an own folder).
- iii) In case of language dependent files please use only the files matching to your DocuWare language.
- iv) In case the HotFix concerns the Web Client Server we advise to empty the browser cache.
- v) In case the HotFix concerns the Web Instance then this HotFix must be copied additionally into every new created Web Instance in future.

| Installation path of the HotFix files: | | Server | Client | |
|--|------------|--------|--------|---|
| File: | Version: | | | Installation folder: |
| DocuWare.WorkflowManager.Server.dll | 6.5.0.5861 | X | | %ProgramFiles(x86)%\DocuWare\Workflow Engine\ |
