

Name of ZIP-File:	DW6.7_Hotfix56.zip
Date of ZIP-File (dd.mm.yyyy):	15.06.2018
To be used only with DocuWare version:	DocuWare version 6.7
Language version:	neutral – can be used for all language versions

**DW6.7\_HotfixPack52 must have been installed once before installing DW6.7\_Hotfix53 or following.**

This Hotfix contains other Hotfixes :

/

#### Description of fixed bugs, improvements etc.:

DocuWare Servers:

228202 Improvement of Communication Channel Security (Genuine Channel)

#### Please notice:

- The HotFix includes one or more folders including files. By copying the folders manually into the appropriate installation folder of DocuWare (see table below), files are replaced.
- It is required NOT to rename the original folders or files. This would lead to unexpected system behaviour. If you like to keep the original files then move them to a different location (create an own folder).
- In case the HotFix concerns the Web Client, we advise to empty the browser cache.

#### Prepare a backup of your installation!

#### Installation instruction – first read completely, then act :

- Expand the HotFix zip file into an empty folder.
- Result is a new folder with the same name as the Hotfix zip file. It contains a subfolder structure.
- In the following table the column "Folder" lists the extracted folder(s), column "Files inside" lists the number of files inside this folders. Column "Location" lists where to copy the folder(s).

Folder :	Location:	Files inside:
Admin Tool	<DocuWare installation path>	3
Authentication Server	<DocuWare installation path>	3
Content Server	<DocuWare installation path>	3
Notification Server	<DocuWare installation path>	3
Power Tools	<DocuWare installation path>	3
SAP HTTP Server	<DocuWare installation path>	3
Thumbnail Server	<DocuWare installation path>	3
Web\ClientSetupData	<DocuWare installation path>	10
Web\JobServer\bin	<DocuWare installation path>	3
Web\Platform\bin	<DocuWare installation path>	3
Web\Settings\bin	<DocuWare installation path>	3
Web Modules\WebInstall	<DocuWare installation path>	3
Web Service Server	<DocuWare installation path>	3
Workflow Engine	<DocuWare installation path>	3
Workflow Server	<DocuWare installation path>	3
Workflow Server\Imaging	<DocuWare installation path>	3

- ALL folders must be copied to the locations listed in column "Location". By this, files are replaced.

**IMPORTANT:**

**Answer all system messages like "There is already a file with same name" with "Copy and replace".**

- The DocuWare Update will update the DocuWare Desktop of the clients when they are booted.  
Alternatively users can start the update from "DocuWare Desktop Apps" icon in systray.
