**DW6.8\_HotfixPack41 must have been installed once before installing DW6.8\_Hotfix42 or following.**

This Hotfix contains other Hotfixes :

/

#### Description of fixed bugs, improvements etc.:

DocuWare Servers:

228202 Improvement of Communication Channel Security (Genuine Channel)

#### Installation instruction – first read completely, then act :

- In case **DW6.8\_HotfixPack41** was installed before then don't install it again, else newer files might be overwritten.
- Expand the Hotfix zip file into an empty folder.
- Result is a new folder with the same name as the Hotfix zip file. It contains a subfolder structure.
- Optionally remove subfolders in case the specific module / server is not installed.
- It is required NOT to rename the original files of your installation. This would lead to unexpected system behaviour. You should keep the original files by moving them to a different location (create an own folder).
- In the following table the column "Folder" lists the extracted folder(s), column "Files inside" lists the number of files inside this folders. Column "Location" lists where to copy the folder(s).

#### Do you have a backup of your installation?

| Folder :               | Location:                    | Files inside: |
|------------------------|------------------------------|---------------|
| Admin Tool             | <DocuWare installation path> | 3             |
| Authentication Server  | <DocuWare installation path> | 3             |
| Content Server         | <DocuWare installation path> | 3             |
| Notification Server    | <DocuWare installation path> | 3             |
| Power Tools            | <DocuWare installation path> | 3             |
| SAP HTTP Server        | <DocuWare installation path> | 3             |
| Thumbnail Server       | <DocuWare installation path> | 3             |
| Web\ClientSetupData    | <DocuWare installation path> | 6             |
| Web\JobServer\bin      | <DocuWare installation path> | 3             |
| Web\Platform\bin       | <DocuWare installation path> | 3             |
| Web\Settings\bin       | <DocuWare installation path> | 3             |
| Web Modules\WebInstall | <DocuWare installation path> | 3             |
| Workflow Engine        | <DocuWare installation path> | 3             |
| Workflow Server        | <DocuWare installation path> | 3             |

Greyed out instructions are not relevant for this HotFix

- ALL folders must be copied to the locations listed in column "Location". By this, files are replaced.  
**Important: Answer system messages like "There is already a file with same name" by "Copy and replace".**
- The DocuWare Update will update the DocuWare Desktop of the clients when they are booted.  
Alternatively users can start the update from "DocuWare Desktop Apps" icon in systray.
