

Name of ZIP-File:	DW6.9_Hotfix31.zip
Date of ZIP-File (dd.mm.yyyy):	11.08.2017
To be used only with DocuWare version:	DocuWare version 6.9

DW6.9_HotfixPack18 must have been installed once before installing DW6.9_Hotfix19 or following.

This Hotfix contains other Hotfixes :	29
---------------------------------------	----

Description of fixed bugs, improvements etc.:

DocuWare Desktop / Import:

193453 Shutdown of OCR provider process fails, leading to a blocked Import

Installation instruction – first read completely, then act :

- In case **DW6.9_HotfixPack18** was installed before then don't install it again, else newer files might be overwritten.
- Expand the Hotfix zip file into an empty folder.
- Result is a new folder with the same name as the Hotfix zip file. It contains a subfolder structure.
- Optionally remove subfolders in case the specific module / server is not installed.
- It is required NOT to rename the original files of your installation. This would lead to unexpected system behaviour. You should keep the original files by moving them to a different location (create an own folder).
- In the following table the column "Folder" lists the extracted folder(s), column "Files inside" lists the number of files inside this folders. Column "Location" lists where to copy the folder(s).
- In case of an in any way spreaded installation copy the relevant folders also onto the other machines.

Do you have a backup of your installation?

Folder :	Location:	Files inside:
Web	<DocuWare installation path>	2

Greyed out instructions are not relevant for this HotFix

- ALL folders must be copied to the locations listed in column "Location". By this, files are replaced.
Important: Answer system messages like "There is already a file with same name" by "Copy and replace".
- After applying this hotfix on server side, please update the Desktop Apps on the clients.
